

Hot Archive for SharePoint Online add-on

Cut down SharePoint storage costs without losing access

If you are currently protecting, or looking to protect, your Microsoft 365 data with Keepit, you can now add Hot Archive for SharePoint to move rarely used data out of production, cut storage costs, and keep every file fully accessible on demand.

Why purchase this add-on?

SharePoint Online quietly becomes one of the biggest line items in your Microsoft 365 bill. Sites multiply, files pile up, and soon you're paying production prices for data nobody opens. Most can't be deleted, so it stays in production, driving up storage costs. Traditional archiving fixes the cost but buries data in cold storage, adding friction right when you need it back.

You can now purchase this add-on to Keepit for Microsoft 365 to effectively reduce storage costs while maintaining full access to sites and files.

KEY CAPABILITIES

Effortless, guided archiving

Preserve sites and files with step-by-step workflows that include review, filtering, and a savings dashboard.

Precise targeting, zero guesswork

Tag and filter sites by template, inactivity, size, or custom attributes to target the right data.

Your metadata, ready to use

Import a comma-separated values (CSV) export of site metadata from SharePoint and use it as a filter.

File ownership and history, intact

Item stubs retain the original file's Author and Editor, helping restore not only data but also relationships.

Recovery on your terms

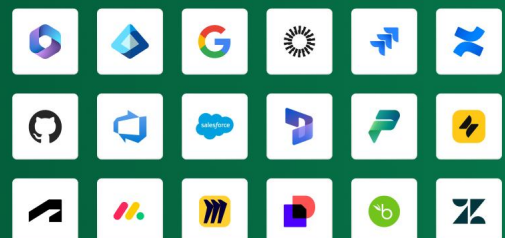

Restore preserved files individually or in bulk according to your needs.

Zero manual effort

Preserve items on a recurring schedule, eliminating manual work and the risk of mistakes.
