Keepit Enhanced Compliance add-on

If your compliance requirements are specific, your contract terms and audit support can be, too.

Enhanced Compliance is an add-on for Keepit customers who need contract terms and audit support beyond our standard agreement. Whatever the reason — regulation, governance, or risk policy requirement — we'll work through it with you in a structured way to fulfill your needs.

What it can cover

Regulatory and outsourcing requirements

Contract terms that can support your obligations under the Digital Operational Resilience Act (DORA) and comparable national or sector outsourcing frameworks for financial institutions and other regulated organizations.

Your customized contract

Customer-specific terms, supplementary agreements, and customer-prescribed schedules your procurement or legal team requires where Keepit's standard documentation doesn't already cover them.

Data protection and security addenda

Terms for jurisdiction- or sector-specific requirements beyond Keepit's standard Data Processing Agreement.

Third-party and supply chain due dilligence

Support for customers who face heightened vendor oversight.

A running service, not a document pack

Every day, Keepit retains your data, stores it immutably, and keeps it retrievable with documentation that supports compliance auditing. Your obligation doesn't pause, so the service doesn't either. That's why Enhanced Compliance is a subscription. When an audit, legal hold, or regulator request arrives, it's handled at the support service level of your platform package tier.

Availability and how to get started

This add-on is available for customers on **Business Resilience** or **Enterprise Resilience** packages.

Raise compliance requirements early in the contracting process so there's time for review and negotiation. Keepit reviews every request case by case, looking at scope, technical feasibility, operational requirements, and commercial considerations.

Talk to your Keepit partner to start the conversation.

Your data. Here today. Here tomorrow.
