

Keepit Backup and Recovery for Microsoft Azure DevOps

Protect and swiftly recover Microsoft Azure DevOps data for business continuity

Lose Microsoft Azure DevOps data and you've lost your **software development brain and nervous system**. Under the shared responsibility model, Microsoft ensures the availability of the platform, but **your data is your responsibility**. Without proactive backups or disaster recovery strategies, the smallest mistake or malicious act can severely cripple your organization's software development lifecycle.

Awarded for its impenetrable architecture and ease-of-use, Keepit ensures that your data remains accessible and can be recovered swiftly and accurately at all times. Keepit effectively minimizes the impact of data loss and the burden of recovery on your teams.

Time-saving usability

Easy to implement and intuitive, Keepit requires minimal expertise to use — while delivering confidence in your ability to swiftly recover your data whenever you need it.

Confidence that you can recover

Have all your data always at your fingertips with comprehensive, automated backups of your data and metadata.

Assured data integrity

With Keepit, you're certain that your backups are immutable — they can't be modified or deleted. Stored in our vendor-independent cloud, your data remains accessible at all times.

THE RISK

In the first half of 2025, Azure DevOps had 74 incidents reported, affecting pipelines, repos, boards, and others.

PROVEN BENEFIT

Keepit customers were able to realize a 163% return on investment when deploying the Keepit solution. Payback was achieved in under six months.

"We quickly figured out that we needed a backup as Microsoft does not meet our retention requirements. Also, the restore options provided are extremely limited."

Stefan Toefferl – Senior Data Center Engineer, ALPLA

Retain access to all your software development data in Azure DevOps with Keepit

KEY CAPABILITIES

Automated backups

Customize and automate backup jobs so your data remains preserved and recoverable whenever you need it.

Proactive monitoring

Data Protection and Anomaly Detection Dashboards help maintain backup integrity and health and allow for early identification, investigation, and remediation of risks to data.

Flexible restore options

Restore objects in bulk or granularly to guarantee fast and precise recovery.

Instant search and preview

Find what you need fast with Keepit's powerful search. Use filters to identify data, and the preview function check it before restore or share with a secure link in one click.

Unlimited retention

Customize retention for up to 99 years with no extra costs.

Compliance and reporting

Easily document and prove compliance with backup requirements and data protection efforts.

WHAT WE COVER

Projects and organization

- Projects
- Teams
- Iterations
- Areas
- Members
- Users
- Agent Pools
- Deployment Pools
- Repositories

Planning and tracking

- Azure Boards
- Backlogs
- Boards
- Work Items
- Queries
- Team Sprints
- Delivery Plans

Reporting and collaboration

- Dashboards (including widgets)
- Wiki (project wiki)

Build and release pipeline

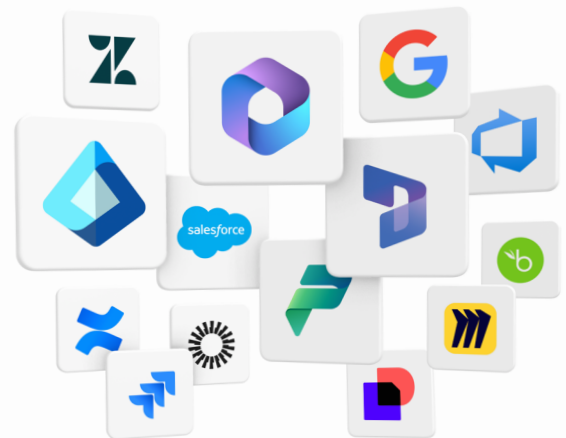

- Pipelines
- Releases
- Environments
- Deployment Groups
- Agent Queues
- Library
